Methylene Blue
Analysis

Customer Name: Micor Inc.
Address: 800 Claremont Ave. Bensalem Pa. 19020

Your sample film strips have been tested for archival quality (residual thiosulfate concentration). They were tested according to the methylene blue method described by the American National Standards Institute.

Concentrations of less than (<) 1.4 µg (micrograms) indicate archival quality, and greater than (>) 1.4 µg indicate non-archival quality. The test is only meaningful and accurate if performed no later than two weeks after processing. It is our understanding that we have received your film within the 2 week time-frame.

Actual test readings are provided below, as well as "pass/fail" check marks.

[illegible]

Archival quality, as measured by residual thiosulfate concentration, is defined in ANSI Standard IT9.1-1988 "A photographic film composed and treated so that under archival storage conditions it is suitable for the preservation of records having permanent value". This same Standard sets the archival limit at 1.4 mg for residual thiosulfate.

A vertical strip of a calendar, likely from a 1950s-era desk calendar. The strip is divided into three visible sections, each representing a month. The top section shows the letter 'A' in a large, bold, black serif font. The middle section shows 'MAR' in the same font. The bottom section shows 'JUN' in the same font. Between the month labels, there are horizontal lines and small, illegible text, possibly indicating days of the week or specific dates. The overall appearance is that of a black and white photograph of a physical object.

SINCE 1939
MICROFILM CORP

Methylene Blue
Analysis

Customer Name: Micor Inc
Address: 200 Clamont Ave. Bensalem, Pa. 19020

Your sample film strips have been tested for archival quality (residual thiosulfate concentration). They were tested according to the methylene blue method described by the American National Standards Institute.

Concentrations of less than ($<$) 1.4 μ g (micrograms) indicate archival quality, and greater than ($>$) 1.4 μ g indicate non-archival quality. The test is only meaningful and accurate if performed no later than two weeks after processing. It is our understanding that we have received your film within the 2 week time-frame.

Actual test readings are provided below, as well as "pass/fail" check marks.

TEST IDENT.	ACTUAL CONCENTRATION	MEETS ANSI STANDARD ($<$) 1.4 μ g	DOES NOT MEET ANSI STANDARD ($>$) 1.4 μ g
MARKING Bureau 8/29/91	1.9	☒	☐
		☐	☐
		☐	☐
		☐	☐
		☐	☐
		☐	☐

Archival quality, as measured by residual thiosulfate concentration, is defined in ANSI Standard IT9.1-AS: "A photographic film composed and treated so that under archival storage conditions it is suitable for the preservation of records having permanent value". This same Standard sets the archival limit at 1.4 μ g for residual thiosulfate.
